

### 3D Monochrome Paper Craft Instructions

#### Packet Contains:

5 landscape template sheets (gray and white)

1 template frame (black)

Double sticky sided spacers

#### Will need:

Liquid glue, liquid cement, or hot glue and gun

Scissors or exacto knife

This video contains information on how to layer landscape templates with the sticky spacers, it contains information on how to build the frame:

the  
does not

#### Frame Instructions:

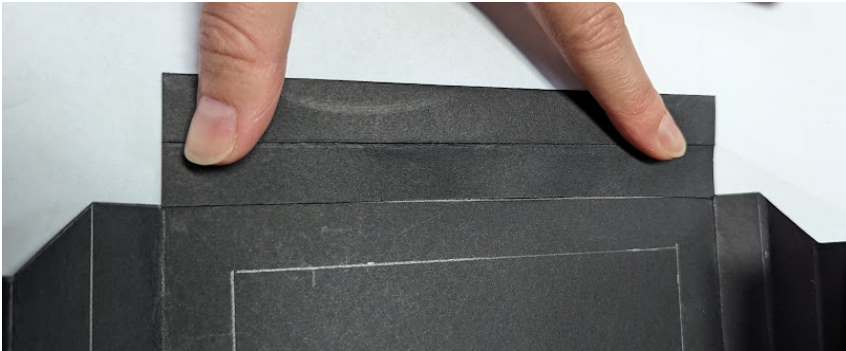

1. Cut out the frame following the pencil guidelines (black piece of paper), so it resembles this:

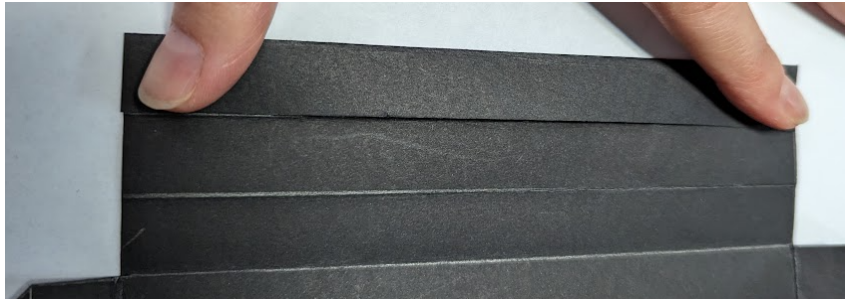

2. Fold the long side flap in towards the center of the frame along the pencil guideline. Run a hard item along the crease to force the cardstock to maintain the shape. Unfold the crease slightly.

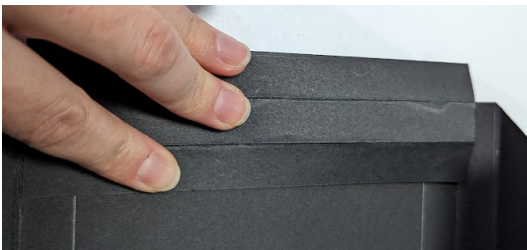

3. Fold the long flap in half towards the center of the frame along the pencil guideline. Unfold slightly.

4. Fold the outer half of the flap in towards the center of the frame following the pencil

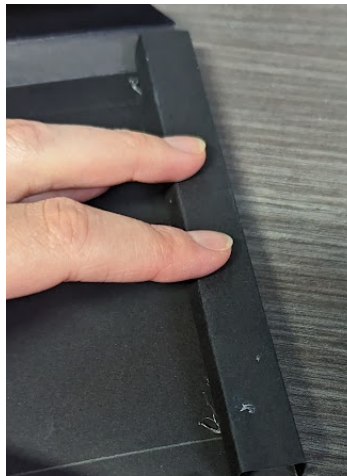

- guideline.
5. Fold along the final line of the flap in towards the center of the frame. This should form an open box structure that lines up with the inner line on the frame.

6. Repeat steps 2 through 4 for the other long side, and the top and bottom of the frame.

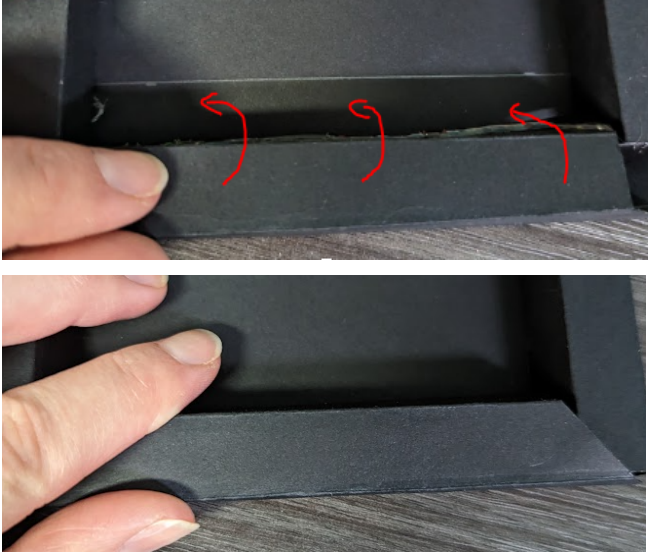

7. Apply a line of glue along the outermost fold of the long side of the frame, and then press it to the frame back to form an open box. Tip: do this on a flat surface.

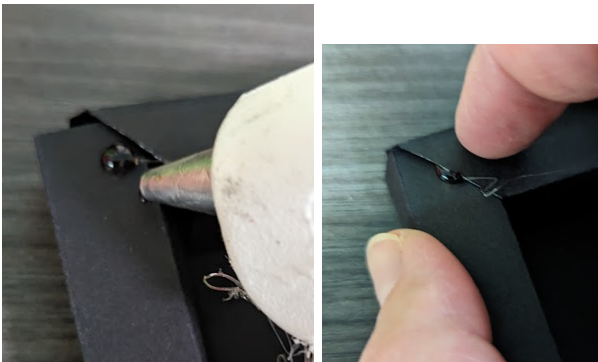

8. Repeat step 6 with the other long side of the frame.
9. Apply the glue along the top outermost fold of short side of the frame and fold it into the frame back to form the top box of the frame.

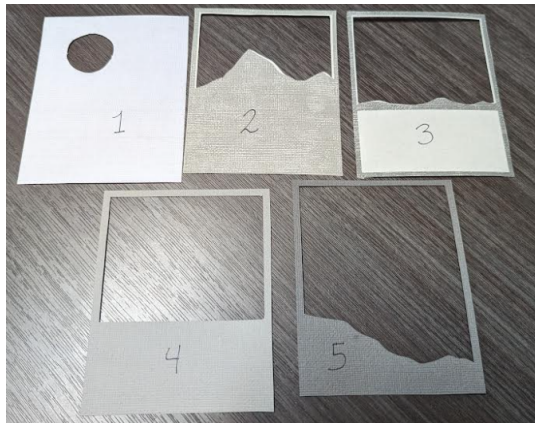

10. Repeat with the bottom of the frame.

11. Apply a drop of glue to under the corner flap of the frame, and then press the edge together. Clean off any excess glue (easier if not using a hot glue gun). Repeat for the other 4 sides.

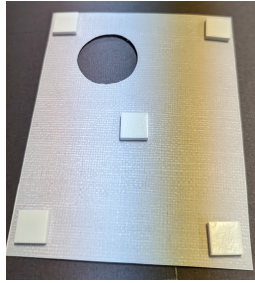

Picture Instructions:

1. Cut out all the stencils and number them accordingly **on the side with ink**:

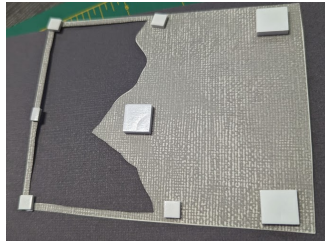

2. Apply the large sticky spacers to the first stencil on the **side with ink**. Put a large spacer in each corner, and one in the middle. Take the film off the outside facing side of the sticky spacer so they are sticky.

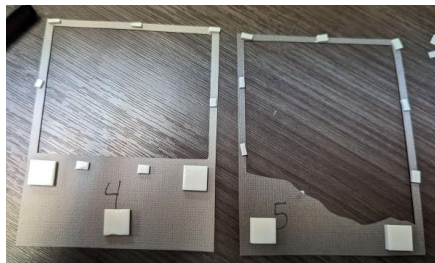

3. Gently drop stencil 1 into the frame, sticky spacers facing down. Press the spacers into the back of the frame on a hard surface.

4. Cut the tiny spacers in half, and apply them to the frame around the top outside of template 2, then use the big spacers for the mountains.

5. Lay stencil 2 into the frame and gently press down.
6. Repeat these steps for the remaining stencils in order. Remember to put the spacers on the side with ink.

7. Enjoy your finished product!
